The Year of PVC Innovation

2003 is off to a brisk start. Many new projects are in the works and we are busy finishing the backlog of work from last year. We have many exciting new things to show you in the coming issues of The Liner Letter.

Foremost on the agenda is new technical information on the strength testing of thermally welded PVC field seams using

air channel testing. After completing two very large projects last fall using this technique to verify peel strength of field seams, EPI has a wealth of technical information on this process. If you are interested in learning more before the papers are published, just give us

a call at EPI, and we will be glad to brief you about the newest innovation in geomembrane field seam strength testing.

EPI will be exhibiting at the Golf Course Superintendents Association of America conference and show in Atlanta from February 13th to 15th. Come and visit us at Booth 4278 in "The New Exhibitors Pavilion" and learn more about the highest quality PVC geomembrane available to the turf grass industry anywhere. EPI has the knowledge and capabilities to provide you with quality liners and expert installation service.

Fred Rohe will be presenting a special case study on Peel Strength Testing of PVC Geomembrane Thermally Welded Field Seams Using Air Channel Testing at Geosynthetics 2003 in Atlanta, GA on Monday, February 10th. He will also be presenting the fabrication and installation technical portion of the PGI Constructing with PVC Geomembranes short course to be held on the same day. If you are interested in attending, give us a call toll free 800-OK-LINER.
