Canadian Alliance

Environmental Protection, Inc. has recently formed an alliance with Layfield Geosynthetics and Industrial Fabrics, Ltd. of Edmonton, Alberta Canada. EPI has been designated exclusive distributor of Layfield geosynthetic products for Michigan, Illinois, Wisconsin and Minnesota.

This means EPI will now be able to supply, fabricate and install a new line of geosynthetic containment products; such as Enviro Liner[®], which is available in three basic styles, and is a highly UV stabilized membrane. Available in both black and white, it can be fabricated in large panels and is ideal for exposed applications.

EPI can now fabricate and supply the HAZGARD[®] line of secondary containment liners from Layfield. HAZGARD[®] 500 and 1000 series liners are specifically designed for fuel handling facilities. They are also excellent general secondary containment materials when used for the storage of compatible chemicals. Also, EPI can supply the two new HAZGARD[®] containment materials,

HAZGARD[®] 100 and 250. This alloy material is designed for excellent general chemical resistance and ease of installation.

In 1995 EPI formed an affiliation with Filmtex in South America. After 10 years, this alliance has proven itself to be a positive impact on the geosynthetic industry in Colombia, Venezuela, Chile, Ecuador, and Peru as well as influencing Brazil and Argentina. EPI's new international venture with our Canadian counterparts will now provide our customers with access to more new products and expanded services.

For more information about this new line of materials available from EPI, contact Brad DeArment at 800-OK-LINER or email brad@geomembrane.com
