LINER LETTER

Volume 15 Issue 5 - November, 2nd 2015

Digging up the past

A team from EPI spent a couple days out in Mancelona at the old EPI plant, digging up old test liners. The oldest liner being 29 years old, installed in 1986 to 14 year old liner being installed in 2001. Look for more information about the process and testing soon!

EPI Celebrates 35th Anniversary

Enhancing our environment by preserving water resources for future generations...That has been the mission of EPI since 1980! 2015 marks the 35th year that Environmental Protection, Inc has been working to protect our precious fresh water resources.

EPI was the pioneer in thermal welding of PVC Geomembranes and worked with TRI & the PGI to develop a methodology to air channel test PVC field seams.

The Liner Company

EPI's Quality Control Manual has been designed to exceed industry requirements and customer expectations. For unparalleled quality, speed, and ease of installation there is no equal to pre-fabricated Geomembranes from EPI.

We are the **ONLY** Fabricator in North America that removes test

samples from actual factory seams during the welding process, not "representative" samples (i.e. trial welds). Some of our applications can be seen in places such as the Columbus Uppground Reservoir in Columbus, Ohio, the Antrim/Kalkaska County Landfill, in northern Michigan, and the Coachella Canal in southern California.

EPI~ preserving water resources for future generations...
